State Geospatial Data Coordination Procedure

Purpose of the Procedure

Flood insurance studies search for geospatial data during Discovery tasks. If needed data are not available, studies might fund the collection of new data and would like to know about other organizations that might share in these costs. Detailed information about the role geospatial data coordination in studies is in the *Geospatial Data Coordination Implementation Guide*, which is available at https://hazards.fema.gov/femaportal/docs/GeoDataImplem_V3.pdf and the *Geospatial Data Coordination Guidance Document*, which is available at <http://www.fema.gov/media-library/assets/documents/34953>.

Resources developed through FEMA's geospatial data coordination activities provide information about data and contacts for organizations that have geospatial data that cover large areas (like states) in which many studies are interested. Studies can avoid wasting time with dead-end searches and cold calls by starting with these proven sources of information.

One resource is this Geospatial Data Coordination Procedure. It outlines sources of geospatial data and contact information, preferences for base map data and state geospatial participation in studies, and other useful information for the State.

If you have questions about this procedure or other geospatial data coordination resources, contact the geospatial data coordination lead in your Region 1 Service Center:

Diana Rodriguez
Compass Regional Service Center 1
(312) 780-7710
rodriguezad@cdmsmith.com

State Geospatial Data Coordination Procedure

Default Flood Hazard Base Map for the State

The default base map for flood hazard maps for the State is an image (orthophoto) base map.

Geospatial Data Coverage

Find below information about and links to statewide (and Federal agencies' national) geospatial datasets. The list is provided to save time during Discovery activities when building a list of candidate geospatial datasets available for the study; it is not a prescription of datasets that must be used in a flood insurance study.

Datasets for DFIRM Production

Orthophotos

Dataset name: Maine_0.15m_Orthophotography_2014

Data currentness: October 2014

Accuracy/Scale: 1:5,000

Horizontal datum: NAD 83

Fee associated? No

Available for redistribution? Yes.

Dataset source: (MEGIS) Maine Office of Geographic Information Systems

Dataset contact: Maine Office of Geographic Information Systems, GIS Coordinator , OIT.Customer-Support@maine.gov , 207-624-7700

Notes: Maine Statewide Orthoimagery Project - All imagery was collected during the 2014 Spring flying season during leaf-off conditions for deciduous vegetation in the State of Maine. The sun angle was at 30-degrees or greater, and streams were within their normal banks. During the flight planning and acquisition, a significant effort was made to limit clouds, snow, fog, haze, smoke, or other ground obscuring conditions in the imagery. In no case does the maximum cloud cover exceed 5% per image. Within the immediate areas of power plants, factories, or controlled agricultural burns some steam or smoke and/or shadows may be visible on imagery.

Additional orthophotos for specific geographies are also available at <http://www.maine.gov/megis/catalog/>.

Transportation (roads, railroads, and airports)

Dataset name: E911.NG_ROADS

Data currentness: Publication date – October 2013

Accuracy/Scale: 1:24,000

Horizontal datum: NAD 83

Fee associated? No

Available for redistribution? Yes

Are road names part of the dataset? Yes

Dataset source: Maine Public Utilities Commission (MEPUC), Maine Emergency Services Communications Bureau (ESCB)

State Geospatial Data Coordination Procedure

Dataset contact: NG9-1-1 Spatial Database Manager, (800) 6652830

Notes: E911RDS contains updated road centerline and road name data for Maine at 1:24,000 scale. E911RDS digital roads were developed, and are maintained, to serve the Enhanced 911 project in Maine. In 1988, Maine voters approved the statewide deployment of Enhanced 9-1-1 service. Enhanced 9-1-1 has many public safety benefits, the two most important features are: the public's ability to dial 9-1-1 for all emergencies and automatic caller location information, critical to speeding up the dispatch of emergency services. The Maine Office of GIS (MEGIS) is working with the Public Utilities Commission (MEPUC), Emergency Services Communication Bureau (ESCB) to support a statewide implementation of Enhanced 9-1-1 service. MEGIS' role in this implementation is to provide technical assistance to towns that need to establish physical addresses. Physical addresses for participating towns are developed based on community defined address intervals, and road names, applied to an updated set of digital roads. E911RDS data contains up-to-date road names and address ranges for participating Maine towns.

Data is statewide and divided by minor civil divisions. The data set was developed from USGS 1:24,000 digital roads data and is in ArcInfo coverage format. The project used GPS collection and worked with each municipality to verify road and road name data. Other data sources include MEDOQs (appended, compressed USGS Digital Orthophoto Quarter Quadrangles), 10 meter panchromatic sharpened SPOT imagery from the USA Select Statewide Program and US Department of Commerce, Bureau of Census TIGER/LineFiles. A related table Standard Geocodes for Maine Minor Civil Divisions, 1971 is available at [http://megis.maine.gov/catalog/ \"Tables\"](http://megis.maine.gov/catalog/\). The coverage includes the ARC items E911, RDNAME, RANGE. Ongoing maintenance of the final data includes the addition and/or correction of roads, road names and address ranges at the request of each municipalities Addressing Officer.

Dataset name: Railroads (RAILROUTESYS)

Data currentness: October, 2011

Accuracy/Scale: 1:24,000

Horizontal datum: NAD 83

Fee associated? No

Available for redistribution? Yes

Are road names part of the dataset? Yes

Dataset source: (MEGIS) Maine Office of Geographic Information Systems

Dataset contact: GIS Coordinator, (207) 624-3494, patrick.johnson@maine.gov

Notes: Railroads (RAILROUTESYS) is a statewide railroad coverage for Maine at 1:24000 scale. The data was extracted from MEDOT.MErail24 files and an updated database by MaineDOT staff starting in 2009. Attributes include: Route Code, Calibrated, Owner, Operator, Track type, Status, Passenger, and Common Name. Attribute and linework accuracy were verified using USGS, MEGIS, Maine Department of Transportation resources, and some local knowledge. Attributes of sidings and yards is difficult to determine, and has not been fully checked. In yards, exact line accuracy may be lacking. Accuracy of main and branch routes is expected to be very good. The attribution of the dataset was updated in 2011 with information provided by MaineDOT. In October of 2006, MaineDOT rail coordinators George Jackman and Nate Moulton

State Geospatial Data Coordination Procedure

helped to identify the rail routes owned by the State of Maine and managed by MaineDOT. The state owned rail (including MaineDOT managed) was updated in April of 2011 by the Results and Information Office of the Maine Department of Transportation.

Dataset name: Airports

Data currentness: March 2011

Accuracy/Scale: 1:100,000

Horizontal datum: NAD 83

Fee associated? No

Available for redistribution? Yes

Are road names part of the dataset? Yes

Dataset source: (MEGIS) Maine Office of Geographic Information Systems

Dataset contact: GIS Coordinator, (207) 624-7700

Notes: This dataset includes all 179 public and private airports, heliports, seaplane bases and landing strips for ultra light aircraft derived from a semi-annual update of the FAA database provided to the Maine Department of Transportation. The dataset also includes other airports in Maine which are not registered with the FAA. One FAA-registered airport in New Hampshire is included (Skyhaven - DAW - in Rochester). One Transport Canada-registered airport in New Brunswick (St Stephen - CCS3) is also included.

Hydrography (rivers, streams, lakes, and shorelines)

Dataset name: National Hydrography Dataset (NHD)

Data currentness: varies

Accuracy/Scale: It is based initially on the content of the U.S. Geological Survey 1:100,000-scale Digital Line Graph (DLG) hydrography data, integrated with reach-related information from the U.S. Environmental Protection Agency Reach File Version 3.0 (RF3).

Horizontal datum: NAD 83

Fee associated? No

Available for redistribution? Yes

Are hydrography names part of the dataset? Yes

Dataset source: USGS

Dataset contact: <http://nhd.usgs.gov/>

Notes: The National Hydrography Dataset (NHD) is the surface water component of *The National Map*. The NHD is a digital vector dataset used by geographic information systems (GIS). It contains features such as lakes, ponds, streams, rivers, canals, dams and stream gages. These data are designed to be used in general mapping and in the analysis of surface-water systems.

Political boundaries (county, municipal)

Dataset name: County Boundaries, CNTY24

Data currentness: January 2014

Accuracy/Scale: 1:24,000 Approximate horizontal accuracy is 51 meters

Horizontal datum: NAD 83

Fee associated? No

Available for redistribution? Yes

Dataset source: (MEGIS) Maine Office of Geographic Information Systems

State Geospatial Data Coordination Procedure

Dataset contact: GIS Coordinator, (207) 624-7700

Notes: CNTY24 contains state and county boundaries for Maine, mapped at 1:24,000 scale. The coverage has polygon topology and was created in Arc/Info from METWP24 by a select on arcs coded TYPE = state, county, and coastline. Polygons in the coverage are labeled with COUNTY, CNTYCODE, TAG, LAND, ISLAND. Arcs in the coverage are coded for TYPE and LAND. Please note recommended feature level metadata items FMSRC, FMSRCORG, FMSRCDAT, FMPROCSS, FMUPDORG, FMUPDDAT have been added to the arc coding of this coverage. These items are intended for use in providing specific information about the source of changes to the location of arc features in the coverage and contain codes that cross reference the elements Source Citation Abbreviation, Source Publication Date, Process Step, Process Contact and Process Date in Federal Geographic Data Committee (FGDC) compliant metadata for the coverage.

Dataset name: Town Boundaries, METWP24

Data currentness: July 2015

Accuracy/Scale: 1:24,000

Horizontal datum: NAD 83

Fee associated? No

Available for redistribution? Yes

Dataset source: (MEGIS) Maine Office of Geographic Information Systems

Dataset contact: GIS Coordinator, (207) 624-7700

Notes: METWP24 depicts political boundaries, common town names, and geocodes for Maine at 1:24,000 scale. The coverage was created from USGS, 7.5 minute map series, town boundaries. The Maine GIS base layer COAST, which contains Maine's coastal Mean High Water (MHW) mark and Maine islands, was used in the development of METWP24. To correct mapping errors and reflect recent changes to Minor Civil Division (MCD) boundaries, arcs and polygons have been added to or updated in METWP24 from: photo-revised USGS data; Maine GIS base layer coincident features; legal descriptions; GPS data; and Maine Department of Transportation (MEDOT) engineering plans. METWP24 contains USGS 1:100,000 scale data and U.S. Department of Commerce, Bureau of Census, TIGER Line Files 1990 and 2000 where these provide a more correct or best available representation of a coverage feature.

Polygons in the coverage are attributed with the items TOWN, COUNTY, GEOCODE, and CNTYCODE as found in "Standard Geographic Codes for Maine Minor Civil Divisions", 1971. Like COAST, METWP24 contains the item CIREG for island identification numbers based on Maine Department of Conservation, Bureau of Parks and Lands, Coastal Island Registry (CIREG) data.

Publicly owned lands (national, state, and local parks, forests, etc)

Dataset name: Conserved_lands MECONSLANDS.Conserved_Lands

Data currentness: August 2017

Accuracy/Scale: 1:24,000; Approximate horizontal accuracy is 12 meters

Horizontal datum: NAD 83

Fee associated? No

Available for redistribution? Yes.

State Geospatial Data Coordination Procedure

Dataset source: (MEGIS) Maine Office of Geographic Information Systems and Department of Agriculture, Conservation and Forestry

Dataset contact: Anji Auger ,GIS Coordinator (MEGIS), Anji.Auger@maine.gov , (207) 624-7700

Notes: Conserved Lands contains conservation lands ownership boundaries at 1:24,000 scale for Maine land in federal, state, and non-profit ownership with easements. State, county, town, and coast boundary data were obtained from MEGIS town boundary dataset METWP24. 1:24,000 US Geological Survey (USGS) digital line graph data was used for hydrography and transportation features. Where state, county, and town boundaries were coincident with property boundaries, the coincident features were taken from METWP24. Where hydrography, roads, railroads and power-lines were coincident with property boundaries, the coincident features were taken from 1:24,000 digital line graph data. The ownership lines do not represent legal boundaries nor are the ownership lines a survey. Conserved Lands is an inventory only. Original mapping and text on this theme, produced in 1989 and updated in 1993 by R.D. Kelly Jr., Maine State Planning Office (MESPO).

Cadastral (parcels)

Dataset name: Parcels_new

Data currentness: June 2015

Accuracy/Scale: The horizontal positional accuracy of the parcel dataset varies statewide.

This dataset contains updated municipal parcels data along with previously developed parcel data acquired through the municipal grants project by Maine Library of Geographic Information (MLGI). Submission of the municipal grant recipient parcels data was guided by standards presented to the MLGI Board, May 21, 2005, "Standards for Digital Parcel Files" A date field FMUPDAT is attributed with the most recent update date. This dataset also contains municipal parcel data acquired through other sources, the data sets are differentiated by the item FMSCORG.

Horizontal datum: NAD 83

Fee associated? No

Available for redistribution? Yes

Dataset source: (MEGIS) Maine Office of Geographic Information Systems

Dataset contact: GIS Coordinator, (207) 624-7700

Notes: Although GIS parcels data cannot replace detailed ground surveys, the data can assist municipal officials with functions such as accurate property tax assessment, planning and zoning. Towns can link maps to an assessor's database and display local information. Officials can show tax-payers how proposed development or changes in municipal services and regulations may affect the community. In many towns, parcels data also helps to provide public notices, plan bus routes, and carry out other municipal services.

Terrain (elevation)

Dataset name: Contours_2FT

Data currentness: February 2015

Accuracy/Scale: Varies

Vertical datum: NGVD 88

State Geospatial Data Coordination Procedure

Fee associated? No

Available for redistribution? Yes.

Dataset source: (MEGIS) Maine Office of Geographic Information Systems

Dataset contact: GIS Coordinator, (207) 624-7700

Notes: This is a composite data layer of 2' contours created from lidar data collected in Maine between 2006 and 2013. The contours were created using GDAL tools and an interval of 2'. Due to the fact that some areas were collected at high tide, some areas do not have contours that have a zero-value. The data are referenced to NAVD88. Vertical accuracy is 12cm or better. Digital maps retain the accuracy of their source materials. The best use of data mapped at scales of 1:500,000 and 1:250,000 is in statewide planning and studies; at 1:100,000 in regional planning and studies; at 1:62,500 and 1:24,000 in detailed studies and local planning; and at 1:12,000 and 1:5,000 or larger scales in parcel level studies and detailed local planning. Updates, corrections, and feedback, incorporated in the Maine GIS database are made in accordance with "Data Standards for Maine Geographic Information Systems", 2002, and coordinated by MEGIS

Useful Risk MAP Discovery Data Sources

Preliminary information on Discovery data sources is provided in this document to reduce the level of effort needed on each subsequent Discovery data collection effort.

Coordination with local community sponsors for additional local data still remains an integral part of Discovery and local data should be used where appropriate.

The National Geospatial Data Coordination Procedure document contains information on data resources available from other Federal agencies (OFAs), including those that FEMA maintains at the national level, and should be used in conjunction with this State Geospatial Data Coordination Procedure document. In addition, FEMA and its contractors have created a geospatial Discovery Data Repository to host data that are not readily accessible through direct sources such as Web sites or subscription services and/or are not updated on a frequent basis. Instructions on accessing the Discovery Data Repository are given in the national Geospatial Data Coordination Procedure document.

Table 1 identifies data resources that are available at the regional and State levels, and also if there are no data available other than the national datasets. Resources in this table have been identified as appropriate for Discovery projects and may not represent the best data sources for FIRM production (please see the Preferred Base Map Sources section of this document for geospatial data that meets FIRM production requirements).

Table 1. Discovery Data Resources

Data	Data Source	Location
Watershed boundaries	National	Discovery Data Repository
Jurisdictional boundaries	National	Discovery Data Repository
	State	MEGIS Town Boundaries: http://www.maine.gov/megis/catalog/

State Geospatial Data Coordination Procedure

Data	Data Source	Location
Tribal land boundaries	National	Discovery Data Repository

State Geospatial Data Coordination Procedure

Data Distribution Process for State Data

Electronic on-line Data is available for download at the [ME GIS Website](#).

Online Option: Access Instructions: Where file size and Internet access permit, data requests can be made available via File Transfer Protocol (FTP).

For hardcopy media MEGIS does some custom mapping, with available Maine GIS data, as time allows. If you have a custom mapping question please call the technical support line at (207) 287-6144 and ask about an estimate for your mapping needs.

Federal Nationwide Geospatial Data Holdings

Information about nationwide holdings and programs of Federal agencies is available from the Data.gov geospatial catalog at https://catalog.data.gov/dataset?metadata_type=geospatial.

Elevation, orthophoto, boundary, and transportation data can also be found through the USGS' National Map service: <https://viewer.nationalmap.gov/basic/>.

Finding and Accessing Other Existing Geospatial Data

Find below information about and links to ways of searching for additional geospatial data available for the State. These capabilities can be useful for finding geospatial data other than the statewide and Federal data listed above, including those of special governments, counties and parishes, municipalities, tribes, universities, and other organizations.

Clearinghouses and Inventories for the State

MEGIS provides technical support for Maine GIS data, estimates on custom mapping, as well as consultation on data and application development, as time permits. [ME GIS Website](#)

3D Elevation Program

The U.S. Geological Survey (USGS) National Geospatial Program is developing the [3D Elevation Program \(3DEP\)](#) to respond to growing needs for high-quality topographic data and for a wide range of other three-dimensional (3D) representations of the Nation's natural and constructed features. The primary goal of 3DEP is to systematically collect 3D elevation data in the form of light detection and ranging (lidar) data over the conterminous United States, Hawaii, and the U.S. territories, with data acquired over an 8-year period. Interferometric synthetic aperture radar (IfSAR) data will be acquired for Alaska, where cloud cover and remote locations preclude the use of lidar in much of the State. The 3DEP initiative is based on the results of the National Enhanced Elevation Assessment that documented more than 600 business uses across 34 Federal agencies, all 50 States, selected local government and Tribal offices, and private and nonprofit organizations.

State Geospatial Data Coordination Procedure

Working with People

Useful State and Federal Contacts

The main contacts for the State's geospatial activities and Federal agencies' representatives in State are available on the Mapping Information Platform web site at <https://hazards.fema.gov/contacts/statecontacts/contacts.asp?page=ME>

USGS National Map Liaisons (<https://liaisons.usgs.gov/geospatial/>)– The National Map partnership network cultivates and maintains long-term relationships with partners and develops agreements for The National Map and other initiatives that support USGS science. Dan Walters is the Liaison for Maine (danwalters@usgs.gov).

Maine Geographic Information System (ME GIS) – [ME GIS](#) provides technical support for Maine GIS data, estimates on custom mapping, as well as consultation on data and application development, as time permits.

Involving State's Geospatial Coordinator in Flood Studies

In order to participate in the FEMA flood hazard mapping effort, this office prefers to be contacted in all of the following ways:

- a. MEGIS would like to attend each kickoff/Discovery meeting
- b. MEGIS is a FEMA Cooperating Technical Partner

This state already has a working relationship with the office in the state that is responsible for updating the multi-hazard maps, and they have access to their state's flood map modernization business plan.

Finding Local Geospatial Contacts

Local contacts, including those from special government districts (for example, a regional planning commission); counties, parishes, or equivalent governments; tribes, municipal governments; and other organizations (for example, local universities) also have geospatial data that can help a flood insurance study. Contact information is available from the FEMA archive and web searches at government link portals such as <http://www.statelocalgov.net>.

Some of the regional planning commissions (RPC) in Maine provide GIS services to their member communities. The list of the RPCs in Maine and their websites are listed below.

- Androscoggin Valley Council of Governments, <http://www.avcog.org> , 207-783-9186
- Eastern Maine Development Corporation, <http://www.emdc.org/> , 1-800-339-6389
- Kennebec Valley Council of Governments, <http://kvcog.org/>, 207-453-4258
- Mid-Coast Regional Planning Commission, <http://www.midcoastplanning.org/mapDemoFore.html>, 207-594-2299

State Geospatial Data Coordination Procedure

- Northern Maine Development Commission, <http://www.nmdc.org/planning/gismapping.html>, 207-498-8736
- Greater Portland Council of Governments, <http://www.gpcog.org/>, 207-774-9891
- Southern Maine Regional Planning Commission, <http://www.smrpc.org/>, 207-571-7065

Provide Feedback on This Procedure

When you find information in this Procedure or in other FEMA or outdated, please tell the geospatial data coordination lead in the what was wrong and the correct information (if you know it). Use for the lead listed in the section

Purpose of the Procedure.

The lead will use your feedback to update this Procedure.
