- Finding Local Geospatial Contacts ................................................................................ 15
- Provide Feedback on This Procedure ............................................................................. 15
Purpose of the Procedure

Flood insurance studies search for geospatial data during Discovery tasks. If needed data are not available, studies might fund the collection of new data and would like to know about other organizations that might share in these costs. Detailed information about the role geospatial data coordination in studies is in the Geospatial Data Coordination Implementation Guide, which is available at https://hazards.fema.gov/femaportal/docs/GeoDataImplem_V3.pdf and the Geospatial Data Coordination Guidance Document, which is available at https://www.fema.gov/media-library-data/1499957866635-db34cabb98cb9c3b2f57aad3d216fcff/GDC_Guidance_May_2017.pdf.

Resources developed through FEMA’s geospatial data coordination activities provide information about data and contacts for organizations that have geospatial data that cover large areas (like states) in which many studies are interested. Studies can avoid wasting time with dead-end searches and cold calls by starting with these proven sources of information.

One resource is this Geospatial Data Coordination Procedure. It outlines sources of geospatial data and contact information, preferences for base map data and state geospatial participation in studies, and other useful information for the State.

If you have questions about this procedure or other geospatial data coordination resources, contact the geospatial data coordination lead in your Region 1 Service Center:

Diana Rodriguez
Compass Regional Service Center 1
(312) 780-7710
rodriguezad@cdmsmith.com
Default Flood Hazard Base Map for the State

The default base map for flood hazard maps for the State is a vector base map (road centerlines).

Geospatial Data Coverage

Find below information about and links to statewide (and Federal agencies’ national) geospatial datasets. The list is provided to save time during Discovery activities when building a list of candidate geospatial datasets available for the study; it is not a prescription of datasets that must be used in a flood insurance study.

Datasets for DFIRM Production

Orthophotos

Dataset name: 2016 USDA NAIP Digital True Color Orthophotography
Data currentness: Publication date: July 2016
Accuracy/Scale: From 2009 to present all NAIP imagery acquisitions used the +/- 6 meters to ground specification.
Ground sample resolution: 4-band, 1 m pixel resolution
Horizontal datum: NAD 83
Fee associated? No fee for downloading directly from the RIGIS Data Distribution System located at http://www.rigis.org/pages/2016-usda-naip-imagery
Available for redistribution? Yes
Dataset source: USDA-FSA-APFO Aerial Photography Field Office
Dataset contact: Erica Tefft, erica@edc.uri.edu
Notes: Rhode Island statewide orthophotographs collected on July 3 2016, by the National Agriculture Imagery Program (NAIP). 1-meter (~3.3-foot) spatial resolution, 4 band color (RGBIR). NAIP imagery is available for distribution within 60 days of the end of a flying season and is intended to provide current information of agricultural conditions in support of USDA farm programs. For USDA Farm Service Agency, the 1 meter and 1/2 meter GSD product provides an ortho image base for Common Land Unit boundaries and other data sets. The 1 meter and 1/2 meter NAIP imagery is generally acquired in projects covering full states in cooperation with state government and other federal agencies that use the imagery for a variety of purposes including land use planning and natural resource assessment. The NAIP is also used for disaster response. While suitable for a variety of uses, prior to 2007 the 2 meter GSD NAIP imagery was primarily intended to assess "crop condition and compliance" to USDA farm program conditions. The 2 meter imagery was generally acquired only for agricultural areas within state projects.

Dataset name: April 2014 Rhode Island Statewide High Resolution Orthoimages
Data currentness: Publication date: March 2015
State Geospatial Data Coordination Procedure

Accuracy/Scale: The design accuracy is estimated not to exceed 1.52-meters [4.99 feet] NSSDA 95% confidence (0.88-meters [2.89 feet] Root Mean Squared (RMSE) Error XY (0.62 meter [2.03 feet] RMSE X or Y).
Ground sample resolution: 4-band, 0.3 m pixel resolution
Horizontal datum: NAD 83
Fee associated? No fee for downloading directly from the RIGIS Data Distribution System located at http://www.rigis.org/pages/2014-usgs-imagery
Available for redistribution? Yes
Dataset source: Rhode Island Geographic Information System (RIGIS), University of Rhode Island - Environmental Data Center
Dataset contact: Greg Bonyenge, greg@edc.uri.ed.
Notes: These data consist of 0.3-meter pixel resolution (approximately 1-foot), 4-band (R,G,B,IR) orthoimages covering the State of Rhode Island collected April 9-10 and 17, 2014. An orthoimage is remotely sensed image data in which displacement of features in the image caused by terrain relief and sensor orientation have been mathematically removed. Orthomagery combines the image characteristics of a photograph with the geometric qualities of a map. Each orthoimage provides imagery over a 5000-foot by 5000-foot block on the ground. There is no image overlap between adjacent files. The projected coordinate system is Rhode Island State Plane with a NAD83 datum.

Dataset name: July 2014 USDA NAIP Statewide Orthophotography
Data currentness: Publication date: October 2014
Accuracy/Scale: +/- 6 meters
Ground sample resolution: 4-band color (RGBIR), 1 meter spatial resolution
Horizontal datum: NAD 83
Available for redistribution? Yes
Dataset source: Rhode Island Geographic Information System (RIGIS), University of Rhode Island - Environmental Data Center
Dataset contact: Greg Bonyenge, greg@edc.uri.ed.
Notes: Rhode Island statewide orthophotographs collected in July 12 & 18, 2014, by the National Agriculture Imagery Program (NAIP). The 1 meter and 1/2 meter NAIP imagery is generally acquired in projects covering full states in cooperation with state government and other federal agencies that use the imagery for a variety of purposes including land use planning and natural resource assessment.

Transportation (roads, railroads, and airports)
Dataset name: Rhode Island Department of Transportation Roads; RIDOTrds16
Data currentness: September 2016; Updated: November 2018
Accuracy/Scale: 1:5,000, plus or minus 3 to 5 meters
Horizontal datum: NAD 83
Fee associated? No
Available for redistribution? Yes
Are road names part of the dataset? Yes
Dataset source: RIGIS and RI Department of Transportation,
https://www.rigis.org/datasets/ridot-roads-2016
Dataset contact: Stephen Kut, Database Administrator, RI Department of Transportation; skut@dot.state.ri.us
Notes: This dataset contains street center lines for all Transportation highways, roads, and streets for the entire state of Rhode Island. Includes road names conflated road names from the current RIGIS "Roads-E911" dataset. This data set was created for, and is maintained by, the Rhode Island Department of Transportation for planning and mapping purposes.

Dataset name: Railroad Rights of Way; rail10
Data currentness: March 2010
Accuracy/Scale: 1:5,000
Horizontal datum: NAD 83
Fee associated? No
Available for redistribution? Yes
Are railroad names part of the dataset? Yes
Dataset source: RIGIS and RI Department of Transportation, MIS-GIS section,
https://www.rigis.org/datasets/railroad-rights-of-way
Dataset contact: Stephen Kut, Database Administrator, RI Department of Transportation; skut@dot.state.ri.us
Notes:

Dataset name: Airports; airports13
Data currentness: October 2013; Updated: 2018
Accuracy/Scale: RIDOT staff verified line, polygon, and attribute accuracy. Corrections were made by RIDOT staff. All line work was checked by RIDOT staff using orthophotos. Linear and attribute input finalized by RIDOT staff. 1:5,000
Horizontal datum: NAD 83
Fee associated? No
Available for redistribution? Yes
Are airport names part of the dataset? Yes
Dataset source: RIGIS and RI Department of Transportation, MIS-GIS section,
http://www.rigis.org/datasets/airports
Dataset contact: Mary Hutchinson, Manager, Mapping and Planning Services; mhutch@mappingplanning.com
Notes: This data set was created for the Rhode Island Department of Transportation to show and reference all airports in the state of Rhode Island. Airport coverage contains all airports in the State of Rhode Island as originally digitized from Spring 1997 orthophotography. This data set depicting approximate extent and major features of all airports in the state of Rhode Island. Airport coverage contains all airports in the State of Rhode Island as originally digitized from Spring 1997 orthophotography.
State Geospatial Data Coordination Procedure

Hydrography (rivers, streams, lakes, and shorelines)
Dataset name: Freshwater Rivers and Streams, Streams; streams5k
Data currentness: June 2001; Updated: July 2018
Accuracy/Scale: 1:5,000
Horizontal datum: NAD 83
Fee associated? No
Available for redistribution? Yes
Are hydrography names part of the dataset? No
Dataset contact: rigis@admin.ri.gov
Notes: Rivers and streams in Rhode Island derived from the 1997 National Grid_USA/RIDOT Orthophoto Project.

Dataset name: Lakes and Ponds (1:5000); lakes5k10
Data currentness: October 2010; Updated: June 2017
Accuracy/Scale: 1:5,000
Horizontal datum: NAD 83
Fee associated? No
Available for redistribution? Yes
Are hydrography names part of the dataset? No
Dataset contact: rigis@admin.ri.gov
Notes: Lakes and ponds in Rhode Island as identified and delineated from 1997 1:5000 orthophotography with feature attribute names for major water bodies. Features consistent with RIGIS 1:5000 scale orthophotography base with a nominal accuracy of 10 to 15 feet.

Dataset name: Coastline of Rhode Island
Data currentness: Sept. 1993; Updated: Jun 2017
Accuracy/Scale: RIGIS standards 99 percent; horizontal acc. +/- 50 feet
Horizontal Datum: NAD 83
Fee associated? No
Available for redistribution? Yes.
Are hydrography names part of the dataset? No
Dataset contact: rigis@admin.ri.gov
Notes: This dataset shows the Coastline of RI and nearby CT and MA including Narragansett Bay its tributaries along with near shore and offshore islands.

Political boundaries (county, municipal)
Dataset name: Municipal Boundaries (1997); muni97d
Data currentness: June 2020
Accuracy/Scale: 1:5,000
Horizontal datum: NAD 83
State Geospatial Data Coordination Procedure

Fee associated? No
Available for redistribution? Yes.
Dataset contact: Steve Kut, skut@dot.state.ri.us.
Notes: Political boundary lines for Rhode Island municipalities with city and town feature attributes and name annotation including physical shoreline features for bay and coastal waters including islands and coastal ponds. Terrestrial boundaries from USGS topographic quad 1:24000 scale maps. Bay and coastal boundaries manually digitized from 1997 aerial photography. City and town municipal boundaries defined by established roadways delineated by road centerline vector data created by manually digitizing from 1:5000 aerial photography obtained in 1997.

Publicly owned lands (national, state, and local parks, forests, etc)
Dataset name: State Conservation Areas; StaCons14
Data currentness: Dec 2014, Updated: January 2019
Accuracy/Scale: 1:24,000
Horizontal datum: NAD 83
Fee associated? No
Available for redistribution? Yes
Dataset source: RIGIS, [http://www.rigis.org/datasets/state-conservation-areas](http://www.rigis.org/datasets/state-conservation-areas)
Dataset contact: Paul Jordan, pjordan@dem.state.ri.us
Notes: Approximate edges of Conservation Lands protected by the State of Rhode Island through Fee Title Ownership, Conservation Easement, or Deed Restriction. Includes: Wildlife Management Areas, Drinking Water Supply Watersheds, State Parks, Beaches, Bike Paths, Fishing Access Areas, Local Parks and Recreation Facilities that have been developed with State Grant Funds.

Terrain (elevation)
Dataset name: 2014 NOAA Post-Sandy Topobathymetric LiDAR, 2014 USGS CMGP Sandy LiDAR
Data currentness: Publication dates: March 2012, December 2015, June 2015
Vertical datum: NAVD88 (GEOID09) meters
Horizontal coordinate system: NAD83 UTM Zone 19 North, meters
Fee associated? No
Available for redistribution? Yes.
Dataset contact: Charles LaBash, Research Associate, labash@edc.uri.edu.
Notes: Datasets for Rhode Island from the USGS-managed Northeast LiDAR Project. Coastal LiDAR data for Rhode Island from the 2014 National Oceanic and Atmospheric Administration (NOAA) Post-Sandy Topobathymetric LiDAR project. Here users can download vendor-created LAS files in the RI state plane coordinate system. Coastal LiDAR data for Rhode Island from the 2014 United States Geological Survey CMGP

October 2020 7 State Geospatial Data Coordination Procedure
Sandy LiDAR project. Here users can download vendor-created LAS files (UTM) and DEMs created by RIGIS in the Rhode Island state plane coordinate system.

Dataset name: 2011 Statewide Lidar
Data currentness: July, 2013
Vertical datum: NAVD88
Horizontal coordinate system: Rhode Island State Plane (FIPS 3800) feet (RISPF)
Fee associated? No
Available for Redestribution: Yes
Dataset contact: Charles LaBash, Research Associate, labash@edc.uri.edu
Notes: Detailed elevation data were collected with airborne Lidar technology for the entire area of Rhode Island between April 22 and May 6, 2011. Rhode Island's data collection was a component of the larger Northeast Lidar Project.

Useful Risk MAP Discovery Data Sources

Preliminary information on Discovery data sources is provided in this document to reduce the level of effort needed on each subsequent Discovery data collection effort. Coordination with local community sponsors for additional local data still remains an integral part of Discovery and local data should be used where appropriate.

The National Geospatial Data Coordination Procedure document contains information on data resources available from other Federal agencies (OFAs), including those that FEMA maintains at the national level, and should be used in conjunction with this State Geospatial Data Coordination Procedure document. In addition, FEMA and its contractors have created a geospatial Discovery Data Repository to host data that are not readily accessible through direct sources such as Web sites or subscription services and/or are not updated on a frequent basis. Instructions on accessing the Discovery Data Repository are given in the national Geospatial Data Coordination Procedure document.

Table 1 identifies data resources that are available at the regional and State levels, and also if there are no data available other than the national datasets. Resources in this table have been identified as appropriate for Discovery projects and may not represent the best data sources for FIRM production (please see the Preferred Base Map Sources section of this document for geospatial data that meets FIRM production requirements).

### Data Distribution Process for State Data

Downloadable data can be found at the Rhode Island Geographic Information System website.

### Federal Nationwide Geospatial Data Holdings

Information about nationwide holdings and programs of Federal agencies is available from the Data.gov geospatial catalog at [https://catalog.data.gov/dataset?metadata_type=geospatial](https://catalog.data.gov/dataset?metadata_type=geospatial). Elevation, orthophoto,
boundary, and transportation data can also be found through the USGS’ National Map service: [https://viewer.nationalmap.gov/basic/](https://viewer.nationalmap.gov/basic/).

**Finding and Accessing Other Existing Geospatial Data**

Find below information about and links to ways of searching for additional geospatial data available for the State. These capabilities can be useful for finding geospatial data other than the statewide and Federal data listed above, including those of special governments, counties and parishes, municipalities, tribes, universities, and other organizations.

**Clearinghouses and Inventories for the State**

The Environmental Data Center within the Department of Natural Resource Sciences at the University provides on line access (web-browser only) to most RIGIS data via the RIGIS website. For questions pertaining to specific datasets, please first contact the Point of Contact (PoC) listed in the metadata record under the “Identification Information” section for that dataset. The person listed as the PoC will have the most comprehensive knowledge about that dataset. Data distribution via CDROM is no longer supported.

**3D Elevation Program**

The U.S. Geological Survey (USGS) National Geospatial Program is developing the 3D Elevation Program (3DEP) to respond to growing needs for high-quality topographic data and for a wide range of other three-dimensional (3D) representations of the Nation’s natural and constructed features. The primary goal of 3DEP is to systematically collect 3D elevation data in the form of light detection and ranging (lidar) data over the conterminous United States, Hawaii, and the U.S. territories, with data acquired over an 8-year period. Interferometric synthetic aperture radar (IfSAR) data will be acquired for Alaska, where cloud cover and remote locations preclude the use of lidar in much of the State. The 3DEP initiative is based on the results of the National Enhanced Elevation Assessment that documented more than 600 business uses across 34 Federal agencies, all 50 States, selected local government and Tribal offices, and private and nonprofit organizations.

**Working with People**

**Useful State and Federal Contacts**

USGS National Map Liaisons (https://liaisons.usgs.gov/geospatial/) – The National Map partnership network cultivates and maintains long-term relationships with partners and
develops agreements for The National Map and other initiatives that support USGS science. Dan Walters is the Liaison for Rhode Island (danwalters@usgs.gov).

Of special interest is:

**Rhode Island Geographic Information System (RIGIS)** - The Rhode Island Geographic Information System (RIGIS; [http://www.rigis.org/](http://www.rigis.org/)) is a consortium of government and private organizations employing computer and communications technology to manage and use a collective database of comprehensive geographically related information. Its mission is to monitor, coordinate, and provide leadership for activities related to the use of GIS technology within Rhode Island, to support initiatives to implement or use the technology, and to manage and provide access to a common database of geographically referenced information.

**Involving State’s Geospatial Coordinator in Flood Studies**
In order to participate in the FEMA flood hazard mapping effort, this office prefers to be contacted in all of the following ways:

- RIGIS prefers to be contacted annually by FEMA, and periodically informed of what counties are being worked on.
- Rhode Island has a working relationship with the RIEMA and they have access to their state’s flood map modernization business plan.

**State Coordination Process for Building Geospatial Partnerships**

**RIGIS Executive Committee**
The Rhode Island Geographic Information System (RIGIS) Executive Committee provides policy guidance, oversight, and coordination of the collective efforts of organizations in Rhode Island using GIS technology. It seeks to coordinate data development, adopt technical standards, set distribution policy for GIS products, promote the use of GIS, and provide information and assistance to users. The Committee does not have authority over RIGIS participants but reaches decisions by consensus. Quarterly meetings are held. See the [Rhode Island Statewide Planning Program](http://www.rigis.org/).

The RIGIS Coordinator at the Rhode Island Department of Administration/Division of Information Technology provides staff support and acts as liaison for RIGIS within the state, the Northeast region, and nationally. Member organizations also contribute assistance. The Committee is not funded as a separate unit of state government.
Finding Local Geospatial Contacts

Local contacts, including those from special government districts (for example, a regional planning commission); counties, parishes, or equivalent governments; tribes, municipal governments; and other organizations (for example, local universities) also have geospatial data that can help a flood insurance study. Contact information is available from the FEMA archive and web searches at government link portals such as http://www.statelocalgov.net.

Provide Feedback on This Procedure

When you find information in this Procedure or in other FEMA or State resources that are outdated, please tell the geospatial data coordination lead in the Region 1 Service Center what was wrong and the correct information (if you know it). Use the contact information for the lead listed in the section. The lead will use your feedback to update this Procedure.
